

WALT – understand the consequences of our actions

Dear Humans,

Hello, I am the sun. I have come to talk about a few things that I personally think will not help the universe but actually make your planet worse to live on. I don't want to make a war, I'm just advising you what to do and point out what you are doing.

First of all, you are littering. If you are littering, wild animals will get stuck and/or might think it is food and choke on it. I think it is better if you install more waste bins, maybe the litter will be in those bins, not the floor. If you don't do this, slowly but eventually, all kinds of birds and animals could become extinct. You need to save the environment if you want to keep living on this planet for generations to come. Make recycling bins as well, so that recyclable materials can be recycled.

Next, you are poaching different animals so many times that they might become extinct. It is not good for the environment, those animals might have an important job to keep the rainforest safe for other animals to live in it. Instead of going to the

rainforest for food, construct a farm and feed the animals (e.g. pigs, cows and chickens) until they are ready to poach.

Lastly, you seem to always be fighting! Every country in the world is struggling, and you decide to fight over things you need. Now that is childish! You need to help each other make a plan to stop global warming, to stop littering and to stop poaching near extinct animals. Please use this letter to help the world become a better place.
